

Performance Audit Summary

1. Scope

This audit covers the staging environment database optimization conducted on 2026-09-15.

2. Key Findings

Key Finding 1: Mean response time reduced from 420 ms to 310 ms after applying the covering index.

Key Finding 2: Memory consumption remained constant at 128 MB across all benchmark runs.

3. Conclusion

The covering index achieved the latency target without increasing memory footprints.
